DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 33-53 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4, 7, 10-12, 15 and 17 of U.S. Patent No. 6,064,589 to Walker on May 16, 2000. Although the conflicting claims are not identical, they are not patentably distinct from each other because the conflicting claims are drawn to substantially the same random access memory having a double-gate access transistor coupled to a storage capacitor.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 33-53 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2824

Claim 33 is incomplete as failing to recite the interconnections between claimed elements. Specifically, "a data storage node" (claim 33, line 2) and "a pass transistor" (claim 33, line 3) are not recited to be interconnected to each other. Note that phrases such as "to provide charge transfer to and from the data storage node", which have been held as functional, serve little if not nothing to render a complete circuit structure. Further in claim 41, line 2, the terms "the first channel side gate" and "the second channel side gate" lack proper antecedent bases. It is suggested to change said terms to read --the first channel side control gate-- and --the second channel side control gate--, respectively. In claim 53, line 2, "the substrate insulator layer" lacks proper antecedent basis. It is suggested to change the dependency of claim 53 from claim 33 to claim 34.
